## MISSION STATEMENT

- There is a problem with supplying electricity to all parts of the world; to address this, we are developing a project that will allow us to use renewable energy to supply it to various parts of the world at a low cost and with ease of access; we are considering homeowners who have unused energy as vendors and homeowners who cannot access electricity as lenders; the vendors can lend the power from solar panels, generators, and other sources.
- Using solar panels would assist to reduce air pollution, water usage, reliance on nonrenewable energy sources, and improve long-term human health.
